**More research!**

**Bring to the Leadership team to read more about ESSA**

**Question more research!**

**Revisit team plan and approach to compare with ESSA content.**

**Look at the research for rural areas,**

understand that our context is important and other research might not apply

**We will assess how strong the evidence is**

**Reflect on research**

Reflect on research and what evidence and variables are involved

**meet with goal teams and figure out how to align our goals with research**

**Meet with my team and review how we can apply a more data driven plan.**

Go back and align with ESSA and meet with the Admin and team

**I have to do more reading and become familiar with much of what was presented today.**

**We will go back to our multi-year strategic plan and look at each goal and align it with an appropriate strategy and ESSA approved assessment method.**

**meet with teams again review resources**

**To be more focused on selecting the right research to "back up" the approach/initiative we want to implement**
